

History

In 1951 Dr. Herbert Iann founded Seba Dynatronic as a commercial agent for industrial plants. However, he soon expanded his company to the production and development of measurement technology for leak detection in drinking water distribution networks.

Since July 2012, SebaKMT has been a member of the Megger Group. Megger maintains development and manufacturing sites in the UK, Sweden and the USA, and is already one of the world's largest suppliers of electrical test and measurement equipment for the energy industry.
